

APPENDIX G—IATA SAFETY STANDARDS PROGRAMS

G.0 General

Safety is paramount to IATA and by defining standards and by actively promoting the adoption and use of those standards by the air cargo industry, a very high degree of safety has been achieved in dangerous goods transport. Working closely with governments in the development of the regulations, including ICAO and national authorities, IATA ensures that these rules and regulations are both effective and efficient. The goal is to make it just as easy to ship dangerous goods by air as any other product since that will remove any incentive to by-pass the regulations.

Furthermore, information is key to any safety program, no less for dangerous goods in air transport. By taking initiatives and leading the industry, IATA has developed several safety standards programs which are available to assist the airline industry in developing the most comprehensive and wide-reaching safety programs possible.

The purpose of this Appendix is to highlight some of the critical safety standards programs that are available through IATA and to provide an overview of these initiatives. Contact information for each program is provided following the overview.

G.1 IATA Dangerous Goods Board

General Overview

The goal of the Dangerous Goods Board (DGB) is the initiation, adoption and ratification of harmonized worldwide standards for the safe carriage of dangerous goods by all modes. The implementation of which embrace effective, efficient protocols and procedures that enhance commerce.

Objectives

The primary objectives of the IATA Dangerous Goods Board include:

- input to the development of recommendations for amendments to the ICAO Technical Instructions. Document and ensure the successful implementation of the requirements of the ICAO Technical Instructions into the DGR;
- provision for an open forum for member airlines to exchange and develop information specific to the transport of dangerous goods contained in company material (COMAT);
- implementing a strategy to ensure the application of effective dangerous goods training standards worldwide for operators and also with specific focus on ground handling agents (GHA) and freight forwarders;

- promotion of an open dialogue with civil aviation authorities and the shipping industry throughout the world to ensure safe and compliant operations;
- development of checklists and other tools to be used in establishing "proof of compliance" checks for dangerous goods safety standards.

The IATA *Dangerous Goods Regulations* are developed by the IATA Dangerous Goods Board pursuant to authority of the IATA Cargo Services Conference.

Meeting Schedule

The Board meets twice per year and meetings are usually scheduled prior to ICAO Working Group or Panel meetings.

Membership

The IATA Dangerous Goods Board consists of 12 individuals representing IATA member airlines, appointed by the IATA Cargo Services Conference, each being an expert in the dangerous goods field and each serving on the Board for a period of four years.

The current members are:

Mr. E. Boon	KLM Royal Dutch Airlines
Ms. C. Costa Diniz	DHL Express
Mr. P. Ehrensperger	Swiss International Airlines
Ms. T. Farquharson	Air New Zealand
Mr. T. Howard	Emirates Airline
Mr. N. Iki	Japan Airlines
Ms. F. Lam	Cathay Pacific Airways
Mr. T. Leech	FedEx Express
Mr. A. McCulloch	UPS Airlines
Mr. G. Sokayan	Singapore Airlines
Mr. M. Tobin	Alaska Airlines

Contacts

Chairman:

Mr. Alex. McCulloch
International Standards DG Manager
UPS Airlines
E-mail: alex.mcculloch@ups.com

Secretary:

Mr. David Brennan
Assistant Director Cargo Safety and Standards
IATA
E-mail: brennand@iata.org

The IATA Dangerous Goods Board also welcomes observers from member airlines, IATA industry partners and other associations such as the International Federation of Air Line Pilots' Associations (IFALPA) and International Federation of Freight Forwarders Associations (FIATA). For information on upcoming meetings or for information on how to request observer status to attend a Dangerous Goods Board meeting, please contact the Secretary, David Brennan.

G.2 Dangerous Goods Training Working Group

General Overview

The IATA Dangerous Goods Training Working Group was originally established by the Dangerous Goods Board to review, amend and update all matters pertaining to dangerous goods training and focus on training standards harmonization across the industry.

Objectives

The primary objectives of the IATA Dangerous Goods Training Working Group include:

- developing industry "best practice" dangerous goods training standards to support member airlines in maintaining the highest safety standards;
- reviewing and developing the IATA Dangerous Goods Training Program to ensure that the program is current and fully aligned to the IATA Dangerous Goods Regulations;
- maintaining the content of the IATA Guidelines for Instructors of Dangerous Goods Courses and other training aids to assist instructors in the development and implementation of professional training standards;
- reviewing and updating qualification standards for instructors conducting dangerous goods training; and
- exploring, evaluating and promoting the use of new training technologies. ⊗

The IATA Dangerous Goods Training Workbook series and the *Guidelines for Instructors of Dangerous Goods* courses are developed by the IATA Dangerous Goods Training Working Group.

Meeting Schedule

The Training Working Group meets twice per year, generally in May and October. The Working Group meetings are usually scheduled following the IATA Dangerous Goods Board meetings.

Membership

The IATA Dangerous Goods Training Working Group consists of 12 individuals representing IATA member airlines, appointed by the IATA Dangerous Goods Board, each being an expert in the field of dangerous goods training.

The current members are:

Ms. P. Karbach-Goss	Lufthansa Cargo
Mr. R. Kaushik	Etihad Airways
Mr. J. Lange	Cargolux Airlines
Mr. S. Muljani	Emirates Airline
Mr. P. McCraren	United Airlines
Mr. T. Mills	British Airways/IAG Cargo
Mr. G. Murphy	Scandinavian Airlines System
Mr. E. Ouma	Kenya Airways
Ms. R. Ross	FedEx Express
Mr. S. Saldana	Qatar Airways
Ms. M. Wong	DHL Aviation

Contacts

Chairman:

Mr. Jesper Lange
Senior Instructor, Ground Operations Training
Cargolux
E-mail: jesper.lange@cargolux.com

Secretary:

Ms. Pinar Nielsen
Manager, Dangerous Goods & Cargo Training Standards
IATA
E-mail: parlakp@iata.org

The IATA Dangerous Goods Training Working Group also welcomes observers from member airlines, IATA industry partners and other associations such as IFALPA and FIATA Airfreight Institute. For information on upcoming meetings or for information on how to request observer status to attend a Dangerous Goods Training Working Group meeting, please contact the Secretary, Pinar Nielsen.

G.3 IATA Global Aviation Data Management (GADM)

GADM Program

The aviation industry is tackling numerous challenges on a global scale, namely:

- the continuous strive to further advance safety;
- the consistent discussion with regulators regarding the most important updates in the global regulatory environment;
- the requirement to significantly reduce the CO₂ footprint through more efficient operation and air traffic management;
- the necessity for more effective passenger security processes; and
- the incessant struggle for profitability and the overall need for a more balanced value chain.

In order to tackle the various issues with the right priority, precision and focus, a data-driven approach is essential. This approach must follow SMS principles, including risk assessment and risk mitigation strategies, thereby establishing the foundation for performance-based management and the ability to conduct more predictive analyses.

IATA is supporting this approach through an all-encompassing **GLOBAL AVIATION DATA MANAGEMENT (GADM)** platform. Leveraging IATA's global positioning, this platform is built on a comprehensive data warehouse, integrating data from all possible sources and areas of aircraft operation. IATA, through the Global Aviation Data Management (GADM) programs offers an opportunity to collaborate on extracting valuable and timely insights to support and inform our strategic aviation safety and operations decisions. The participation in the GADM data sharing programs complements IATA's Safety Risk Management programs for systemic safety risks and issues identification, reporting, measurement, and monitoring. The GADM platform includes:

1. **ADX (Accidents Data Exchange)**—IATA pulls together an extensive scope of accident and serious incident data in order to publish the most comprehensive and unbiased quarterly assessment of global airline safety. IATA Safety Report plus regional safety reports; reports are data-driven, with over 65 tables, charts and figures accompanied by expert assessment articles. In addition, ADX's analytical dashboard is interactive, easy to use and allows for a deeper analysis and drilldowns by various Safety Performance Indicators, types of operations and geographies.

2. **IDX (Incidents Data Exchange)**—based on incident reports from operators and ground service providers (GSP) from different disciplines in their organizations such as flight safety, security, technical, cabin, ground, cargo and flight operations. Reports are voluntarily submitted from program member airlines and GSPs. This program had a full technological revamp and was re-launched in 2020 to support faster and better insights generation based on monthly data processing cycles and robust data protection mechanisms. Additionally IDX combines the previous two programs offered by IATA (STEADES and GDDDB) thus making it seamless and easy for participants to submit reports to a singular repository. IDX today has a membership of 220 participants who are able to monitor their safety performance indicators against various industry benchmarks.
3. **FDX (Flight Data Exchange)**—a voluntary data program providing airlines with global and regional benchmarking at an aggregated level through an interactive and user-friendly web platform based on Safety Performance Indicators (TCAS, CFIT, Loc-I, UA, Runway Safety, Global, MAC, Go-Around, etc.). FDX currently has a globally diverse membership of over 170 members and targets to process 6 million flights in 2022.
